First Proposed Claim

A method comprising:

displaying, on a computer display, a plurality of objects that provide a user with the

ability to select one training course from a plurality of training courses; then

receiving input from the user that indicates the selection of the one training course from

the plurality of training courses; then

displaying, on the computer display, a question;

displaying, on the computer display, simultaneously with the question, a complete answer

to the question, the complete answer including a first word, followed by a second

word having m characters, followed by a third word, followed by a fourth word

having n characters, where m and n are both greater than 1;

simultaneously displaying, on the computer display with the complete answer, a partial

answer to the question, the partial answer including the first word and the third word,

the partial answer not including the second word or the fourth word, the partial

answer including m locations for each of the m characters in the second word, the m

locations positioned in the partial answer after the first word in the partial answer and

before the third word in the partial answer, the partial answer including n locations

for each of the n characters in the fourth word, the n locations positioned in the partial

answer after the third word in the partial answer; then

displaying in a first font the m characters of the second word at the m locations in the

partial answer; then

receiving a first character from a user, the first character not being equal to the first

character of the fourth word, the first character being equal to another character of the

fourth word; then

not displaying in the first font any of the n characters of the fourth word in any of the n

locations of the partial answer; then

receiving a second character from the user, the second character received from the user

being equal to the first character of the fourth word; then

displaying in the first font the first character of the fourth word at the first of the n

locations in the partial answer.

Second Proposed Claim

A method comprising:

displaying, on a computer display, a plurality of objects that provide a user with the

ability to select one training course from a plurality of training courses; then

receiving input from the user that indicates the selection of the one training course from

the plurality of training courses; then

displaying, on the computer display, a question;

displaying, on the computer display, simultaneously with the question, a complete answer

to the question, the complete answer including a first word having m characters,

followed by a second word, followed by a third word having n characters, where m

and n are both greater than 1;

simultaneously displaying, on the computer display with the complete answer, a partial

answer to the question, the partial answer including the second word, the partial

answer not including the first word or the third word, the partial answer including m

locations for each of the m characters in the first word, the m locations positioned in

the partial answer before the second word in the partial answer, the partial answer

including n locations for each of the n characters in the third word, the n locations

positioned in the partial answer after the second word in the partial answer; then

displaying in a first font the m characters of the first word at the m locations in the partial

answer; then

receiving a first character from a user, the first character not being equal to the first

character of the third word, the first character being equal to another character of the

third word; then

not displaying in the first font any of the n characters of the third word in any of the n

locations of the partial answer; then

receiving a second character from the user, the second character received from the user

being equal to the first character of the third word; then

displaying in the first font the first character of the third word at the first of the n

locations in the partial answer.

The first proposed claim requires displaying on a computer screen a plurality of objects that provide a user with the ability to select one training course form a plurality of training courses. Then, the first proposed claim requires receiving input from the user that indicates the selection of one of the training courses. Then, the first proposed claim requires simultaneously displaying on a computer screen a question, and a complete answer. The complete answer includes a first word, a second word, a third word, and a fourth word. The second word has m characters and the fourth word has n characters. For example, as shown in Figure 9 of the pending application, the question could be "Who was the first President?" Similarly, as shown in Figure 9, the complete answer to the question could be "The **first** President was **George Washington**."

The first proposed claim also requires simultaneously displaying a partial answer to the question. The partial answer includes the first word and the third word. However, the partial answer to the question does not initially include the second and the fourth words. Instead, m locations are provided in the partial answer for the second word and n locations are provided in the partial answer for the fourth word. Again as shown in Figure 9, the partial answer to the question could be "The _____ President was _____ _____."

After displaying the above-discussed question, complete answer, and the partial answer, the first proposed claim requires displaying in a first font the m characters of the second word at the m locations in the partial answer. Thus, as shown in Figure 10, the partial answer could then be "The **first** President was _____ _____."

Then, after displaying the m characters of the second word, the first proposed claim requires receiving a first character from a user. This character is not equal to the first character of the fourth word. However, the first character is equal to another character of the fourth word. Thus, if "George" is the fourth word, then the character would not be equal to "G" but could be equal to "e". After receiving the first character, none of the characters of the fourth word are displayed in the first font in any of the n locations of the partial answer. Thus, in the example discussed above, the "e" would not be displayed in the first font in the second or the fifth of the n locations of the partial answer.

The first proposed claim then requires receiving a second character from the user. This character is equal to the first character of the fourth word. In the above example,

Page 6 of 7

that character would be "G".   After receiving the second character, the second character would be displayed in the first of the n locations in the partial answer.

The second proposed claim is similar to the first proposed claim except the first word of the first proposed claim is not claimed. Instead, the second word of the first proposed claim is equal to the first word of the second proposed claim. Similarly the third word of the first proposed claim is equal to the second word of the second proposed claim and the fourth word of the first proposed claim is equal to the third word of the second proposed claim.

In light of the rapidly approaching effective date of the USPTO rule change regarding continuation applications, Applicant requests that the interview be held this week.
